

Portable UV Disinfection System

TRU-D

TRU-D SmartUVC is a portable UV disinfection system that precisely measures reflected UVC emissions with Sensor360 to automatically calculate the pathogen-lethal UV dose required for each room, dynamically compensating for room size, shape, and other dose-altering variables such as the position of contents, windows, blinds and doors. TRU-D uses narrow band UVC light for a high efficiency targeting of the DNA-disrupting wavelength that stops pathogens. Tru-D is safe to use in rooms with glass windows and doors.
