

SMS Shoe Covers

Tronex Healthcare

Tronex Healthcare offers the Tronex SMS Shoe Covers, which are meticulously crafted from a breathable, fluid-repellent, spunbond meltblown spunbond (SMS) material. This three-ply material consists of one layer of meltblown polypropylene bonded between two layers of antistatic polypropylene spunbond, offering maximum protection from fluid exposure while also being soft, durable, and appropriate for extended wear. Tronex SMS Shoe Covers feature a non-skid coating with contrasting white "T" sole marking for extra traction. They are fastened with flexible, non-binding elastic for a secure, comfortable fit while ensuring agility and safety.
