

Patient Gown

Peak Textiles

Peak Textiles's ECT Patient Gown allows drainage, feeding and central line tubes to pass through the gown so they are easily visible during bedside care, reducing the risk of misconnections. One size fits most patients and a generous overlap in back eliminates the need to put two gowns on one patient. Built-in central line slits separate lumens from the skin. Drain line and PEG tube slits prevent stress on insertion sites minimizing the need for re-applying dressings and exposure of sites to sources of infection.
