PICIS PreOptimize

PICIS

PICIS PreOptimize is a web-based solution that provides patients who are scheduled for surgery the convenience of entering their medical history securely online. PreOptimize also generates preoperative clinical considerations that help guide clinicians through better adherence to evidence and consensus-based and hospital preoperative protocols. As a result, preop workflow can be optimized at the point of care, enabling more timely and complete assessments, avoiding costly surgery delays or cancellations, saving clinical staff time, and providing the potential of cost savings for the hospital.
