

Reusable Patient Return Electrode

Megadyne

The environmentally-friendly Mega Soft reusable patient return electrode from Megadyne can be used with most isolated electrosurgical generators and eliminate up to 1,500 sticky pads over its 2-year life. It is safer than traditional CQM “grounding” pads as its large surface area and capacitive technology prevents heat build-up. The Mega Soft family has been used in over 50,000,000 procedures with 0 pad site burns.
