

Video-Over-IP Solution

Barco

Barco has launched an uncompressed video-over-IP solution for the integrated operating room, the Nexxis. With Nexxis, video and data become one in a streamlined workflow approach which allows better communication both in and beyond the operating room, while improving operational efficiency. Nexxis uses a high bandwidth 10 Gbps IP (Internet Protocol) network to integrate surgical equipment. Nexxis allows dynamic plug and play of devices and provides the flexibility to modify the setup to meet the ever changing imaging requirements in the operating room.
