

WIS1000 Wireless Video System

Foreseeson

Foreseeson's WIS1000 Wireless Video System is designed to display uncompressed 60GHz HD images with zero latency. It eliminated the need for cross-room cables in medical work areas. The WIS1000 supports high quality 1080p video, and mounts to a variety of surfaces. The transmitter and receiver automatically synchronize, and multiple units can be configured to form a network. An adapter is included in the system.
