

declipseSPECT Viewer

SurgicEye

SurgicEye introduces its declipseSPECT viewer, a solution for 3D navigated radio-guided surgery. Developed in cooperation with leading surgical oncologists, it will enable healthcare professionals to increase the efficiency of surgery with marked tumor structures, providing 3D imaging and navigation in the operating room. declipseSPECT viewer is an extension of the Confident Surgery Suite 300 for 3D radioguided surgery providing surgical oncologists an intuitive guidance and navigation solution to resect radioactive labeled structures. Features include loading and in-situ visualization of preoperative SPECT/CT and PET/CT image data and a co-registered overlay on the patient.
