

Monopolar Enabled Handheld Laparoscopic Instruments

Aesculap

Aesculap offers over 100 patterns of monopolar enabled handheld laparoscopic instruments. The Sovereign monopolar line of reusable scissors, forceps, graspers, and dissectors are designed to meet both the high performance expectations of surgeons and today's rigorous reprocessing environment. Aesculap's take apart design allows the instruments to completely disassemble into four components for optimal cleaning and visual inspection. The instruments are validated for sterilization while fully assembled to maintain efficiencies for operating room staff.
