

Pain Relief System

I-Flow

The ON-Q Pain Relief System, manufactured by I-Flow, a Kimberly-Clark Health Care Company, is an elastomeric, non-narcotic postoperative pain relief system that administers an automatic and continuous flow of local anesthetic through a catheter(s) to the surgical site area or peripheral nerve. Clinical studies have shown that patients who received ON-Q went home an average of 1.1 days sooner, reported up to 69 percent lower pain scores, were up to three times as likely to report high satisfaction scores and are more likely to experience better pain management with fewer side effects. ON-Q offers the most configurations of flow rates and sizes, with the option of a fixed flow rate pump, pump with an ONDEMAND bolus device or Select-A-Flow variable rate controller, as well as a combo of the two.
