

Pretzel-Shaped Laparoscopic Retractor

CareFusion

CareFusion Corp. unveiled the only pretzel-shaped laparoscopic retractor in the North American market, which aids in minimally invasive surgeries. The new Snowden-Pencer pretzel-shaped laparoscopic retractor provides a large surface area that is ideal for retracting or moving large organs and other structures to provide greater visualization and access to the surgery site. The unique shape also provides additional strength compared to traditional retractor shapes. The new retractor features the same 5mm shaft as all Snowden-Pencer laparoscopic retractors to help ensure smaller incisions.
