

Workflow Management Software

Steris

The RealView Visual Workflow Management Software from Steris is designed to help create Lean, highly efficient perioperative environments. According to the company, improvements include an increase of up to 85 percent in OR utilization and a 146 percent improvement in surgical volume without adding ORs or overtime. Real-time, customized patient status is displayed for instant viewing by the entire perioperative team and waiting families. This reduces manual data entry, improves workflow, and helps improve surgeon, staff and family satisfaction, and ultimately HCAHPS scores.
