

# Epidermal Harvesting System

Kinetic Concepts

Kinetic Concepts, Inc. offers its CelluTome Epidermal Harvesting System. According to the company, it gives an automated, precise and reproducible process of harvesting autologous non-damaged epidermal tissue. The CelluTome System allows for a simplified and convenient way to harvest epidermis and provide autologous epidermal micrografts. Epidermal grafting has been clinically demonstrated to aid closure of acute and chronic wounds. This new skin grafting platform will enable wound care physicians to harvest epidermal grafts while minimizing donor site complications.
