

Multi-Touch Monitor

Eizo

The FlexScan T2381W multi-touch monitor from Eizo combines superb image quality, durability, and a design that is optimized for comfortable 5-point multi-touch use. The 23-inch non-scratch touch screen surface is made of reinforced glass. It features a new fully flat surface that enables seamless touch operation. The monitor has a full HD resolution and an IPS panel that has almost no color shift or change in contrast when viewed from different angles, so multiple users can easily view the screen. An overdrive circuit which reduces gray-to-gray response time to only 6 ms when viewing video ensures a clean, sharp image.
