

Protexis Latex Hydrogel Surgical Gloves

Cardinal Health

The new Protexis Latex Hydrogel surgical gloves from Cardinal Health are powder-free, made from natural rubber latex, and their exclusive coating makes them easy to don. Hydrogel is a hydrophilic coating bonded to the interior of the glove, which enhances donning lubricity. Protexis surgical gloves glide on easily – wet or dry – and conform to clinicians' hands for a soft, comfortable fit. The gloves feature a translucent yellow color which looks like a second layer of skin and offers contrast to a colored underglove when double-gloving.
