

Tri-Pull Secure Shoulder Solution

Innovative Medical Products

2013 ESP Award Nominee

IMP's Tri-Pull Secure Shoulder Solution employs three proven systems (Phase4 Gel Splint, Reznik Universal Shoulder Positioner, De Mayo RoTractor) to distract and control precise rotation of the shoulder during arthroscopic surgery. The RoTractor delivers incremental amounts of arm rotation while maintaining shoulder distraction at the same time. This unique solution gives the surgeon complete control of the patient's shoulder in the sterile field without need of an assistant to hold the patient's arm during surgery.
