

Environ-mate DM6000 Series

MD Technologies

MD Technologies offers compact, wall-mounted Environ-mate DM6000 Series units. They are designed to eliminate costs of both disposable canisters and waste disposal, offering tremendous savings. Most (~80%) fluid management cost is for canisters. Environ-mate units silently dispose of fluid from suction field directly to sewer, isolating staff from exposure. Other systems require transporting fluid to disposal sites. Environ-mate requires drains, installed during construction or remodeling. Its low-cost single PT20 Trap catches the smallest polyps.
