

## Neurovascular Probes

Koven Technology

Koven Technology, Inc. announces the introduction of new ULTRA-THIN Neurovascular probes. These new probes are available in fixed and flexible tip styles with widths of just 0.8 mm and 1.2 mm. These new thinner probes enable easier access to the artery and greater visibility. Ultra-thin probes were created for use with the new DVM-4500 Volume Flowmeter. The DVM-4500 provides accurate assessment of vessel patency by enabling precise vessel diameter input within 1/10 of a millimeter for more accurate flow measurements. It has a large color touchscreen operation and saves files into both PDF and DICOM compatible formats to enable integration of test results into your facilities EHR or PACS system.
