

3D Viewing And Recording Products

Sony Electronics

Sony Electronics' Medical Systems Division is unveiling new 3D viewing and recording products that can give urology surgeons and their teams the benefits of added depth and enhanced visualization. Sony's new 3D products include: the LMD-2451MT 24-inch medical grade 3D display, LMD-4251TD 42-inch 3D display for reference, training and education, and the HVO-3000MT 3D medical grade recorder. The Sony displays delivers superb image quality for both 2D and 3D applications, while the HVO-3000MT video recorder allows users to capture 2D and 3D video from the robotic system for post-op review and for use in training and education. Users can record up to 31 hours of high-quality images onto the system's internal hard drive and to a variety of removable media including Blu-ray™ disk, DVD disk, USB removable hard disk, and USB flash memory – all from the da Vinci S or Si systems. Completing Sony's 3D total solution is OPSIGATE, a comprehensive web-based content management and delivery system that enables easy and secure access to shared surgical video, stills and documents throughout a hospital network.
