

Hazardous Waste Cart

Health Care Logistics

Health Care Logistics introduces the customizable Hazardous Waste Cart, a lockable mobile cart that allows staff to properly dispose of varying types of used hazardous materials in a safe, efficient, and separated way anywhere treatment is administered. To customize, users choose their cart color then two colors of security drop inserts. Carts are available in Beige, Cherry, Gray, Maple, Oak, and White; inserts are available in Red (Biohazard), Yellow (Chemotherapy), Black (Hazardous), White, and Blue. Inserts offer an at-a-glance visual for the type of medical waste being disposed of and keep different types of waste separate within the same container. Open-bottomed inserts allow waste to drop into the waste cans inside the cart. Clear acrylic hinged lids have a security plate that deters tampering. The two-door locking Hazardous Waste Cart is made of durable high-quality melamine and features a lock with two keys. Cart includes two waste cans and swivel casters. Security Drop Inserts are sold separately.
