

Olympus DIEGO ELITE Multidebrider

Olympus

The Olympus DIEGO ELITE

Multidebrider is the world's only ENT system to offer both monopolar and bipolar energy blades for hemostasis – as well as traditional standard shaver blades – providing specialists with a full array of surgery options using just one device. Procedures powered by the Olympus DIEGO ELITE Multidebrider offer significantly shorter surgery times compared to those performed using standard blades. Devices with bipolar energy have been shown to reduce bleeding and expedite operating times by as much as 12 percent, as the average procedure time during the study dropped from 101.4 minutes to 88.9 minutes. In addition, compared to its predecessor, the DIEGO ELITE offers improved coagulation performance and further expedites procedures, delivering 27 percent faster tissue removal than previous models.
