BF-190 Bronchoscopes

Olympus

Olympus announced the commercial availability of its 510(k) cleared BF-190 bronchoscopes. The new BF-190 bronchoscopes offer unparalleled maneuverability and flexibility through the combination of their unique Rotary Function and wider tip angulation*, which will potentially allow physicians to access areas of the lung that may not be easily reached with current generation bronchoscopes. The Rotary Function is estimated to reduce hand torque by up to 82 percent, which may translate to a significant reduction in hand fatigue and injury.
