

CleanShield Endoscope Storage Cabinet

AirClean Systems

AirClean Systems is pleased to announce the release of their latest probe storage solution. The CleanShield Endoscope Storage Cabinet provides a proper dedicated storage area that protects delicate endoscopes from potential damage and minimizes environmental contamination of the disinfected endoscopes. CleanShield is constructed completely of thermally fused polypropylene that can be disinfected easily and is non-hygroscopic. The cabinet was designed with special hanging mounts that allow each endoscope to hang vertically while being bathed in clean, filtered air. Designed to accommodate up to nine disinfected endoscope probes, the cabinet is complete with a locking epoxy-coated steel door.
