

E-Z Clean PRECISION Blade

Megadyne Medical Products

Megadyne Medical Products unveiled the new E-Z Clean PRECISION electrodes. The innovative design features a smaller blade width than standard electrosurgical tips allowing for reduced power settings and increased control to maneuver in small spaces, with minimal risk of collateral tissue damage. The EZ-Clean PRECISION Blades expand Megadyne's offering of specialty electrodes for precise cases. The non-stick PTFE coating decreases eschar build-up, reducing smoke and allowing surgeons to achieve consistent cutting and coagulation. Additionally, the product can remove a potentially dangerous sharp needle from the surgical field.
