IQvitals Table Mount

Midmark Corporation

Midmark Corporation, a leading medical solutions provider and trusted leader in digital diagnostic devices for non-acute care, recently introduced the IQvitals Table Mount. The new table mount accessory will help bring automated vitals signs devices to the point of care, minimizing the need for patient conveyance and improving patient satisfaction. Positioned at the side of the exam table, the adjustable swing arm mount supports the emerging trend of lean and six sigma efforts in the exam room by facilitating workflow around the vitals acquisition point – rather than requiring patients to be moved multiple times. An optional USB cord and serial cable allows patient data to be directly uploaded to electronic medical records (EMRs) with the Midmark 625 Barrier-Free Power Examination Table with IQscale, further improving exam room efficiency. In addition, the mount enables easy management of cords to prevent fall hazards and provides storage for the Midmark IQvitals device and accessories, including blood pressure cuffs, pulse oximetry sensors or temperature probe covers.
