

A New Tool To Fight Against Surgical Site Infections

INTEGUSEAL* Microbial Sealant: A Tool in the Fight Against Surgical Site Infections

Prepping and draping are important parts of your pre-op routine, but no prep protocol can completely sterilize a patients skin. Its the pathogens left behind that are the leading cause of surgical site infections. And those are the pathogens that InteguSeal* is designed to handle.

InteguSeal* Microbial Sealant is proven to seal and immobilize the bacteria that survive prep, including MRSA, S. epidermidis and E. coli—preventing them from contaminating the surgical incision.
