

TRU-D SmartUV Virtual Demonstration

SmartUVC™ stops pathogens that routinely compromise healthcare environments.

Increased evidence published in scientific literature confirms that *Clostridium difficile*, MRSA, VRE, *Acinetobacter baumannii*, and influenza are transmitted via environmental surfaces. Published studies indicate that only 50 percent of environmental surfaces in a typical OR suite or patient room may be effectively disinfected; and that a patient's risk of contracting an HAI increases 100 percent when the previous room occupant had been diagnosed with an infection.
